

Datawatch LobbyWatch®

LobbyWatch® is part of the Total Lobby Solution developed by Datawatch Systems. It's a computer program that enables security staff to monitor personnel entering a facility through turnstiles or other entry points that are equipped with a card or VisitorWatch® barcode readers. It improves security by combining card key/barcode verification with visual identification.

- When a valid card or VisitorWatch® barcode is read, LobbyWatch® displays the photo and information associated with the card. Security staff can compare the individual to the photo being displayed to assure they match. One click enlarges a photo for closer examination.
- In the event of an invalid read, LobbyWatch® displays a warning, alerting security staff to investigate the individual.
- LobbyWatch® simultaneously displays information from multiple turnstiles or card readers, enabling one guard to monitor several entry points. *The example below displays photos and data from four turnstiles.*

- Staff can review photos and data from previous entries and attempted entries. Filter logs by name, tenant name, emboss code, site log and date/time range.
- Integrates with turnstiles and card readers. Fully integrated with the Datawatch Access Control database.

The screenshot shows the Lobby Watch software interface with the following data:

Turnstile 1	10:13:09 AM	Turnstile 2	10:12:42 AM
	Name: Ann Doe Tenant: Acme		Name: Bo Starr Tenant: Ajax
<div style="display: flex; justify-content: space-between;"> Front Door Card Reader 10:12:36 AM Side Door Card Reader 10:12:30 AM </div>			
	Name: Joe Lee Tenant: Bender
