

Datawatch VideoWatch®

VisitorWatch® combines access control with on-site Closed Circuit Television (CCTV) monitoring to form an integrated solution.

VideoWatch allows Datawatch Systems' highly trained alarm specialists to remotely access your recording device and review any activity taking place at the time of an alarm. After review of the footage by an alarm specialist, you are notified, at which time the alarm specialist will share what was observed at the time of the alarm, record a copy of the event and send it to you for personal review and follow up. A copy is also archived at the Datawatch Systems Central Station.

Additionally, the footage can be processed by our optional advanced video analytics to add an enhanced level of threat detection. This combination of alarm monitoring and on-site awareness better enables you to determine whether an alarm requires immediate response or routine follow up with support staff or employees the following business day.

Features:

- High-definition video monitoring. (camera specific - contact associate for details)
- Compatible with most network-capable DVRs, NVRs and stand-alone IP cameras.
- Motion detection based camera recording and alarm transmission.
- Optional state-of-the-art video analysis. (contact associate for details)
- Near real-time review of alarm incident footage.
- Ability to provide incident or suspicious person information to authorities based on footage review.
- Fully customizable response instructions and recipient list for footage recordings.
- Recorded footage is archived at Datawatch Systems headquarters.
